Genio

Genio Key

It is a **reversible** nickel-plated brass key with an ergonomic, non-slip grip that is effective in all situations. The key is available in **customized profiles** with regional exclusivity: the key cover and security card include the logo of the AGB Genio Point authorized for duplication. As standard, each package comes with 3 or 5 keys and its security card on sealed casing. The **reset key version** is also available: 3 keys and security card for first use, 2 more keys for recoding and a new card for duplication.

Controlled duplication

The key is protected by **patent**: only AGB can produce the blanks and distribute them to authorized

AGB Genio Point.

For key duplication, the customer must show the key together with the Security Card to AGB Genio Point.

Pass key as standard

The cylinder is supplied with a building site key to facilitate the management of installers and provide greater security to the user, who will thus find the **key casing untouched**.

Genio cylinder

Genio is certified against the most common types of break-ins at the highest level. In torsion attacks, the **sacrificial cut** allows the controlled breaking of the cylinder, to remove the burglar's grasping point while preserving the functional core.

Hardened steel **anti-drill devices** prevent drilling, blocking attacks from the most aggressive bits.

Picking and bumping protection device provides long resistance against both types of opening.

When key is off the cylinder bitting is not decodable thanks to the pin shape.

The high number of pins furthermore guarantees **millions of different key combinations**.

A versatile cylinder

Suitable to any thickness of the door sash; wide choice of finishes and versions:

key - key or
key - key double function*

half cylinder - key

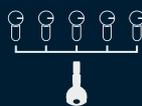

knob - key

18 or 63 mm tang - key

Master key systems

On request, it is possible to encode the cylinders of a building with single key opening (KA), or set up a master key system with specific **access hierarchies**.

AGB Genio Point

It is a duplication center approved by the manufacturer. The AGB Genio Point may have **regional exclusivity** for the duplication of keys (guaranteed by the control of blanks and customized profiles).

Made in Italy and sustainable packaging

Genio is fully manufactured in Italy: from design, to materials and production. AGB chooses a sustainable packaging, made 100% of recyclable paper.
